

Cardboard Box Airplane

Materials Needed:

- Large Cardboard Box
- Sharpie Pen
- Clear Packing Tape or Duct Tape
- Scissors

Directions:

1. Cut all four flaps off the top of the box.
2. Cut a shallow half-moon shape out of each long side of the box.
3. Use your half-moons to trace out propellers and cut their shapes.
4. Round off the corners of the 2 longer box flaps you cut off in step 1, these will be your wings.
5. Trim one of the shorter flaps to a rounded point and leave the other as is.
6. Cut a slit into both long sides of the box under the half-moon cut out. The slit should be the same width as your wing. These are to hold your wings on each side.
7. Cut a slit halfway through the middle of your short flap you did not trim. This will hold the two parts of your tail together. Tape your tail to the back of your box.
8. Cut a small circle from your scrap cardboard for the propellers.
9. Decorate your wings and tail.
10. Tape your propellers and circle to the front of your box.
